

# Prestige Collection

## Materials

In addition to the materials featured in our Prestige Collection, IMETCO offers a variety of steel and aluminum gauges, Galvalume®, stainless steel, and exotic metals such as zinc and titanium.

## Textures

IMETCO's mechanical textures, such as embossing, striations and ribs, accommodate a variety of aesthetic and structural requirements.

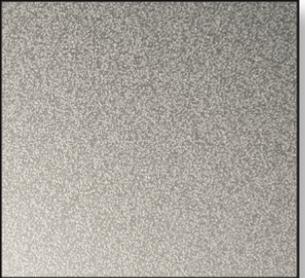

Our exclusive TextureMatte™, available for stainless steel and zinc, features a fine surface texture that reduces glare, minimizes the appearance of finger prints, and balances tonal variations.

As zinc's popularity and the demand for sustainable design in North America continues to grow, United Zinc™, available exclusively from IMETCO, introduces a high-quality domestic zinc option to the market – the only American mined and produced zinc available to the construction industry.
